I am wondering about the urgency at this point, too.

Midas' response to our SOW limits this to an RI for surface water only at only the eight sites named in the NOI. This whole thing may be a bust.

No FS, No sediments, no other areas.

Subject: SOW redline from Midas

We got this at 5:30 last night (even though they had told us they were sending us their SOW last weekend. They have eliminated the FS and treatability study. They are focusing only on the 8 areas identified the Nez Pierce and they are restricting the investigation to surface water (no sediment etc.) Looks like a non-starter. We are reviewing today and will draft comments for submittal back to Midas before the next meeting.
